DETAILED ACTION

Response to Amendment

1. Claim 2 has been amended to include the subject matter of claim 1 (now cancelled) as suggested in the previous Office action. Up on a review, a new prior art reference has been found which is determined to teach the claimed subject matter of original claim 2. Therefore, the indication of allowability has been withdrawn and a new ground(s) of rejection is made in view of the newly found reference as set forth below.

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 2, 3 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable Woo (US 5,808,582) over in view of Farrow et al (US 6,282,248).

Claim 2.

Woo discloses a satellite signal receiver (GPS receiver, see Fig. 12), comprising:

- 1) "a front end" (1202) for receiving a satellite signal
- 2) "a sampling circuit" (1203) for digitizing the satellite signal
- 3) "a processor" (1204) for performing at least a subset of a convolution between a pseudorandom reference code and the digitized signal. See Abstract.

Woo fails to teach the sampling circuit (1203) to have "either a first sampling spacing or a second sampling spacing" and "a mode selection processor for selecting either said first sampling spacing or said second sampling spacing." Farrow et al teaches "a

subsampling circuit" (115,119) to define a digitized signal to have a different sample spacing in order to allow the use of a fixed A/D converter and yet to enable the reception of a wide range of baud rates. See Figs.2 and 3 and related descriptions. Thus, it would have been obvious to one skilled in the art at the time the invention was made to add "a subsampling circuit" (115, 119) to Woo for the purpose of allowing the reception of a satellite signal of a different baud rate, as taught by Farrow et al.

Claim 3.

Woo disclose a GPS receiver, thereby including "a computer" (1205) for computing a position location.

Claim 19.

Fig. 12 of Woo shows "a plurality of processing channels," i.e., I and Q channels.

Allowable Subject Matter

4. Claims 4-18 are allowed.
